1.Estimation of Characteristic Impedance (Zo), and Propagation Constant (y) of aTransmission Line from Primary Constants

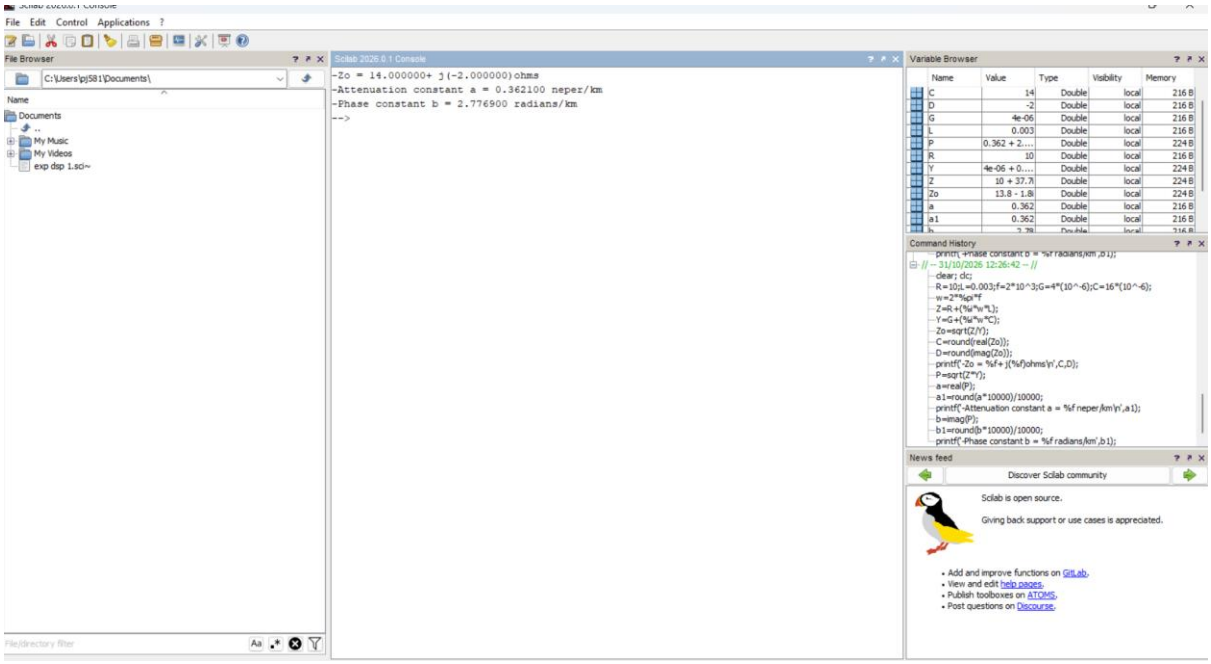

TEST CASE 1

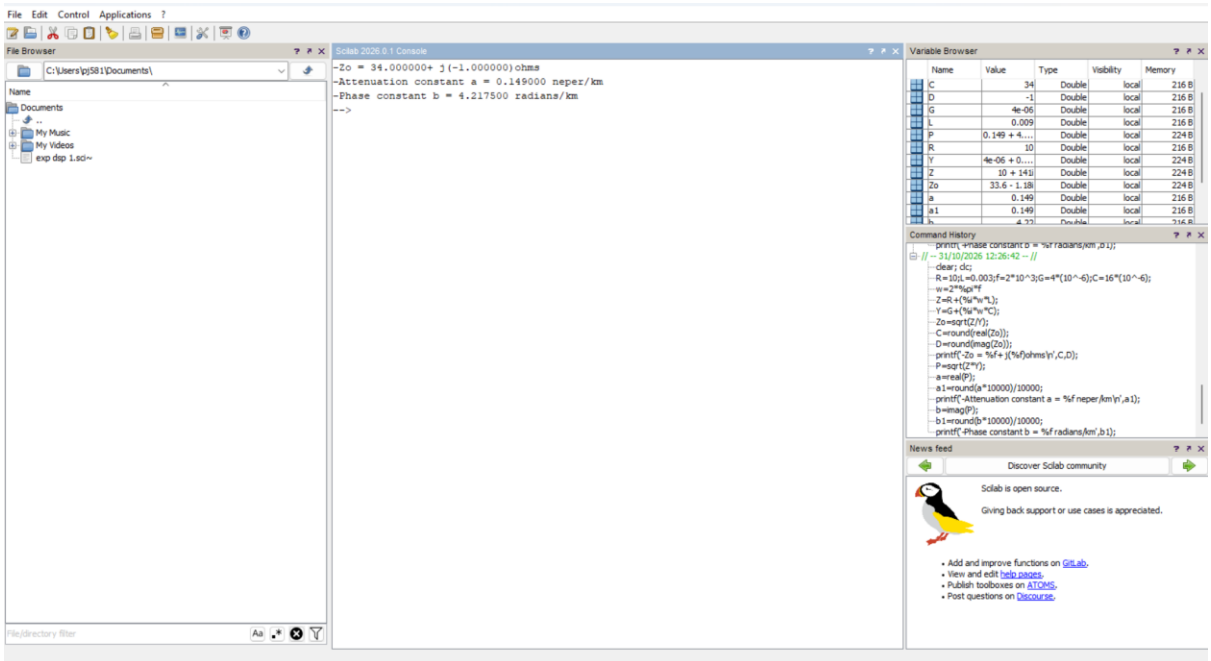

TEST CASE 2

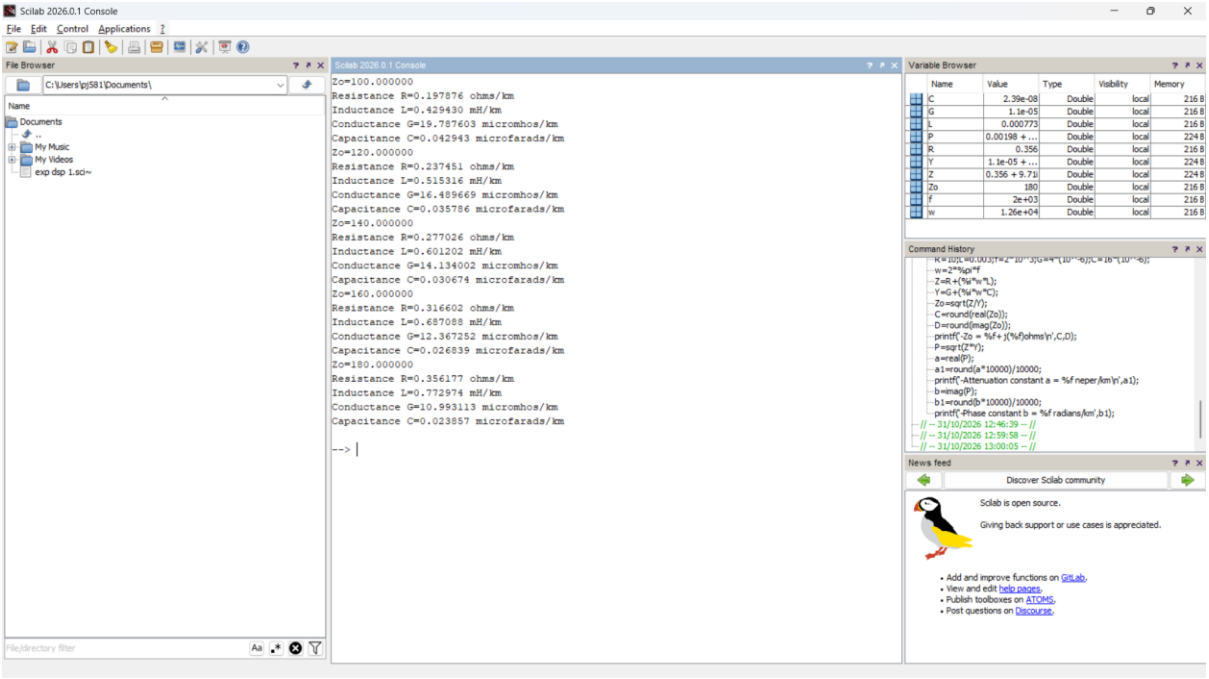

TEST CASE 3

2.Estimation of Primary Constants (R,L,G &C) from Secondary Constants (Zo & y)of an open wiretransmission line

TEST CASE 1

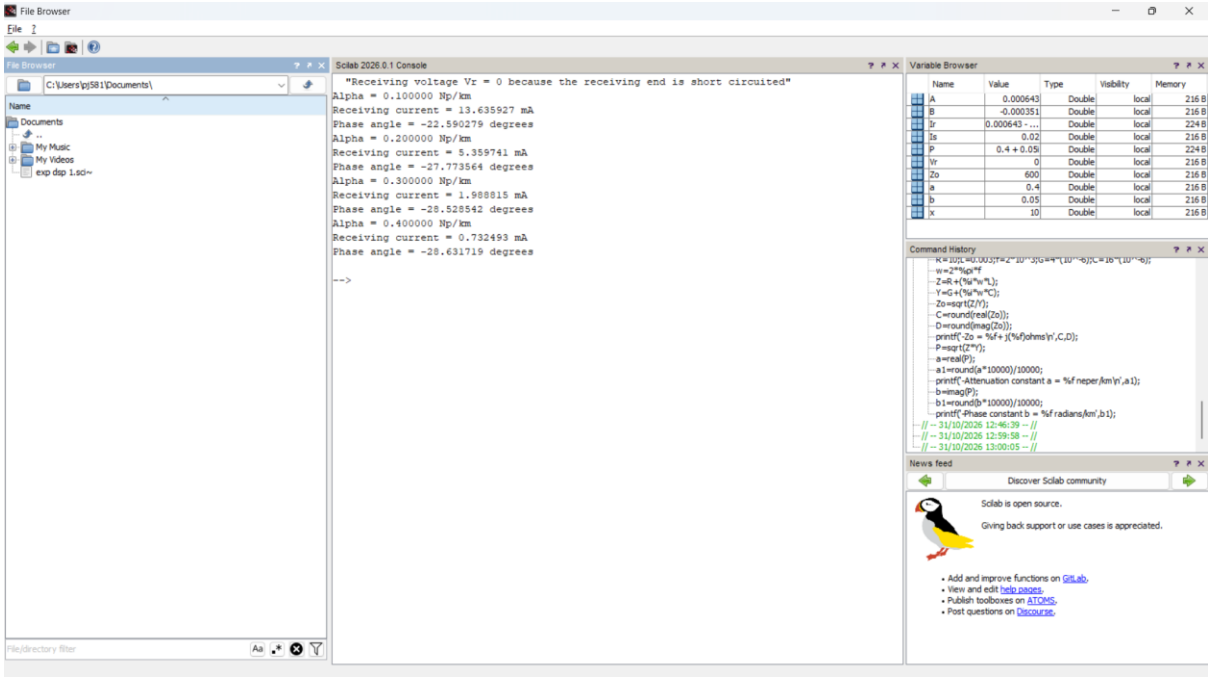

TEST CASE 2

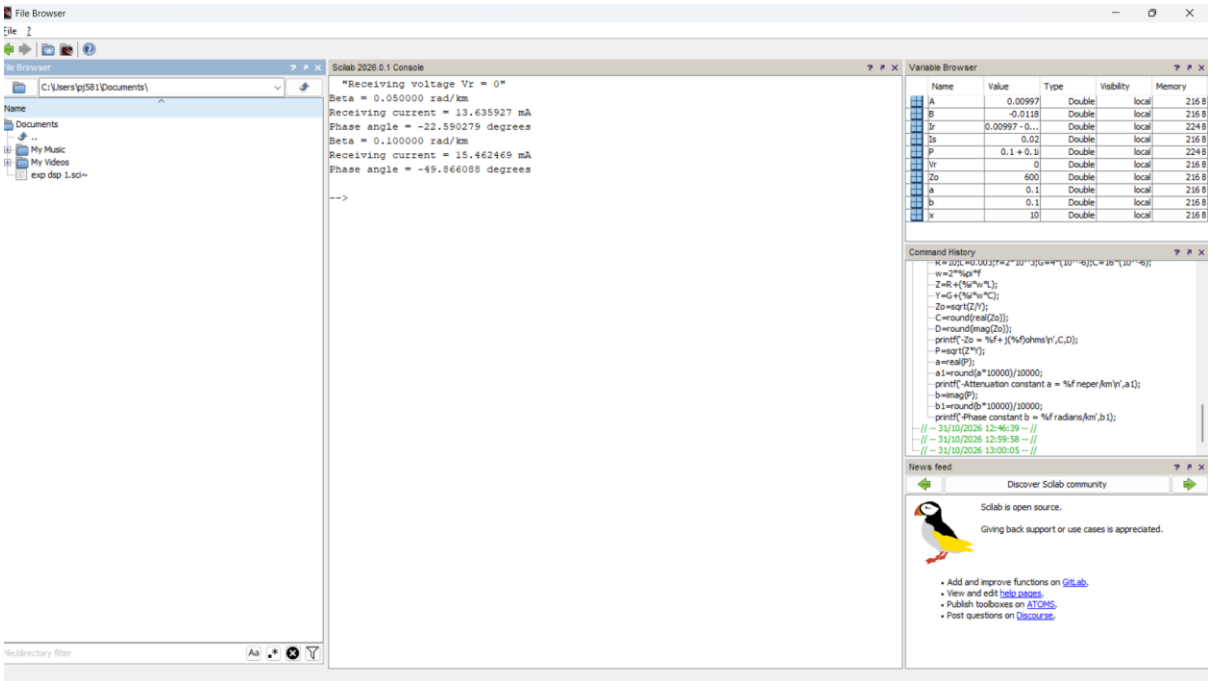

3. Evaluation of current in short circuited Lossless transmission line at the receiving end

TEST CASE 1

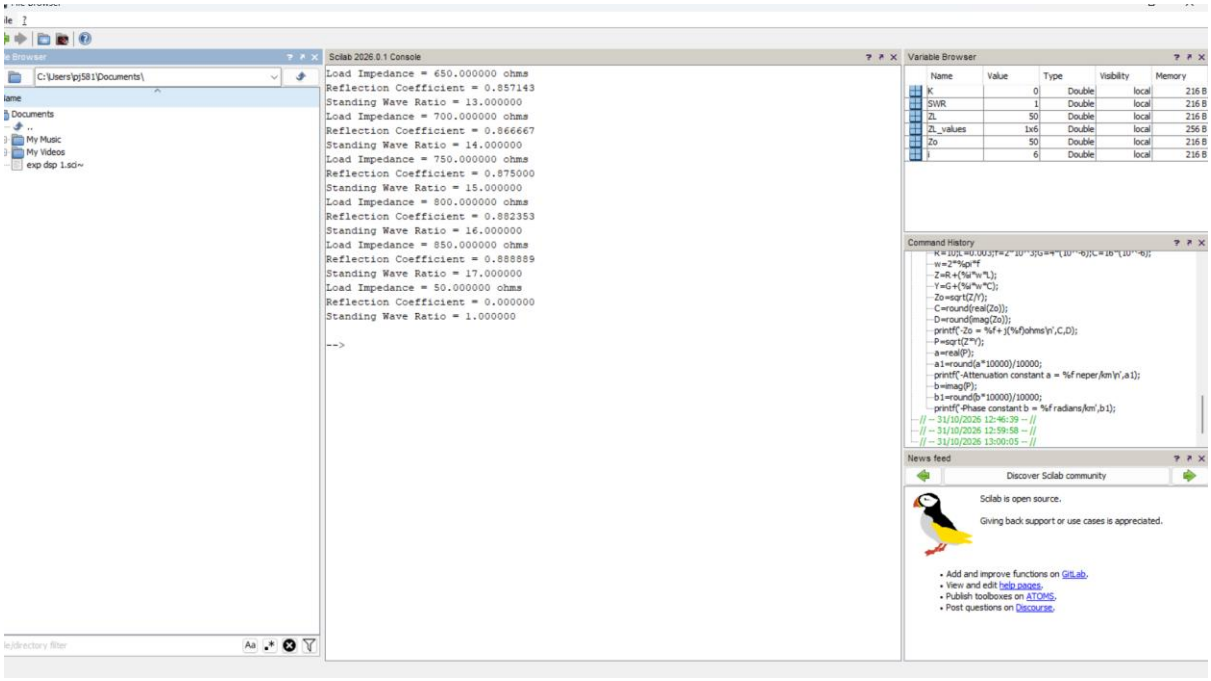

TEST CASE 2

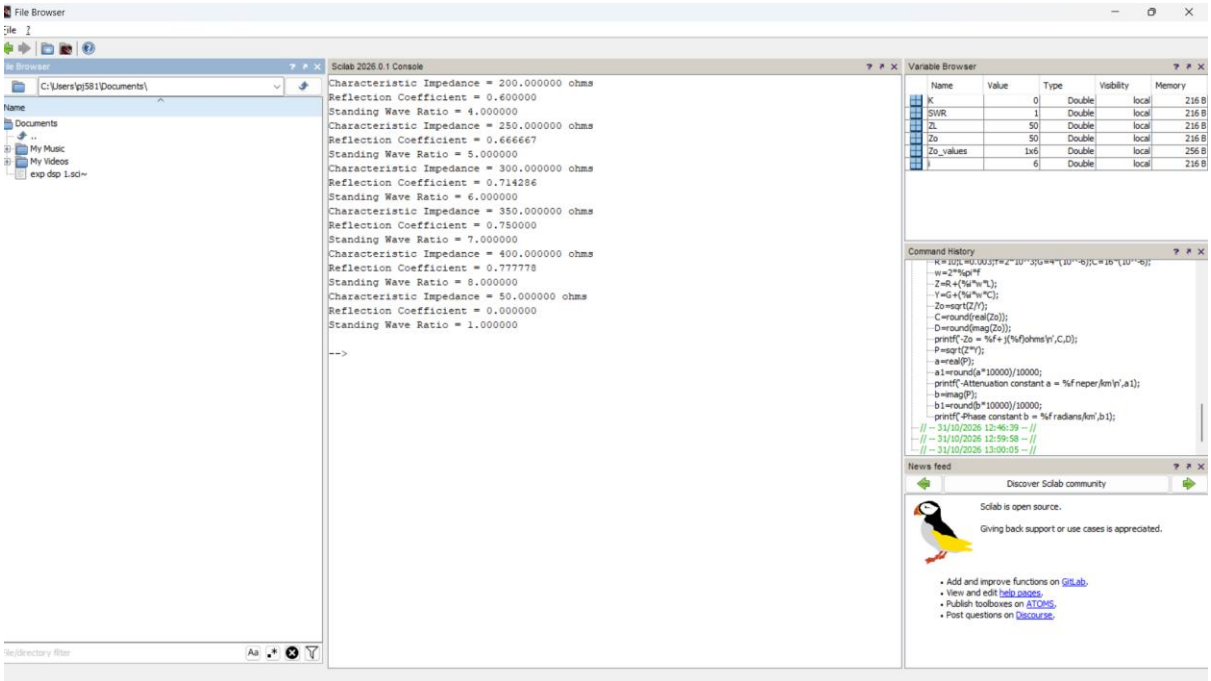

4. Analysis of SWR (Standing Wave Ratio)Transmission Lines by varying a)load impedance b) characteristic impedance

TEST CASE 1

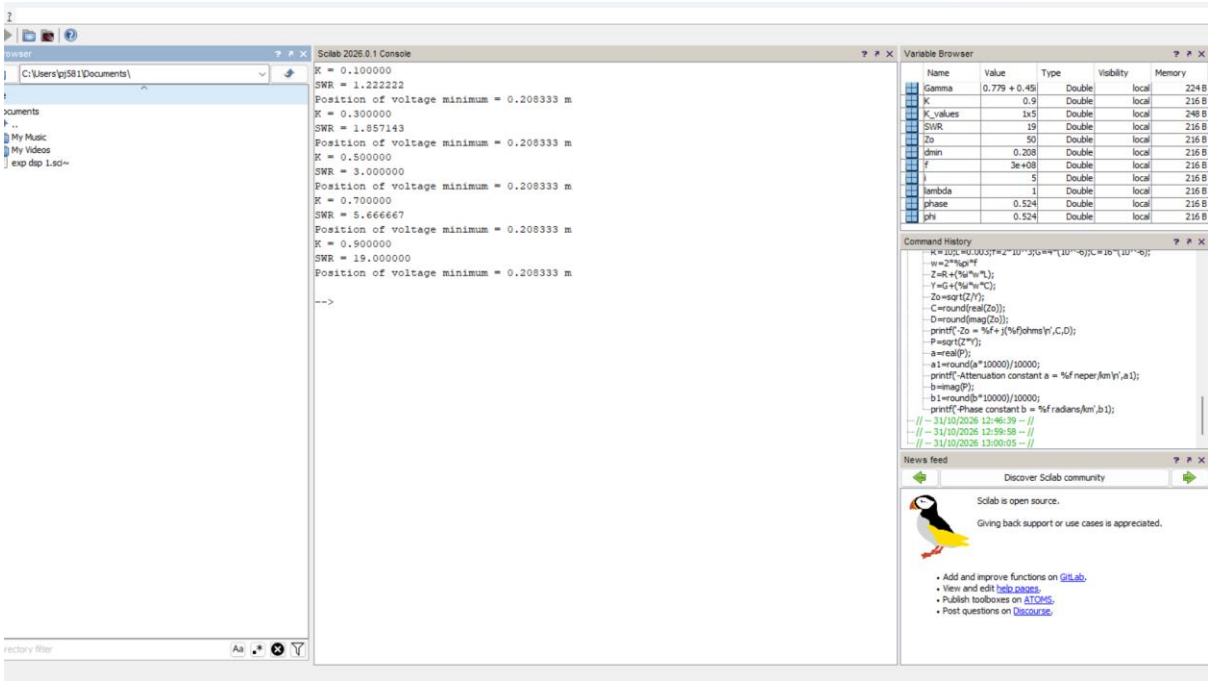

TEST CASE 2

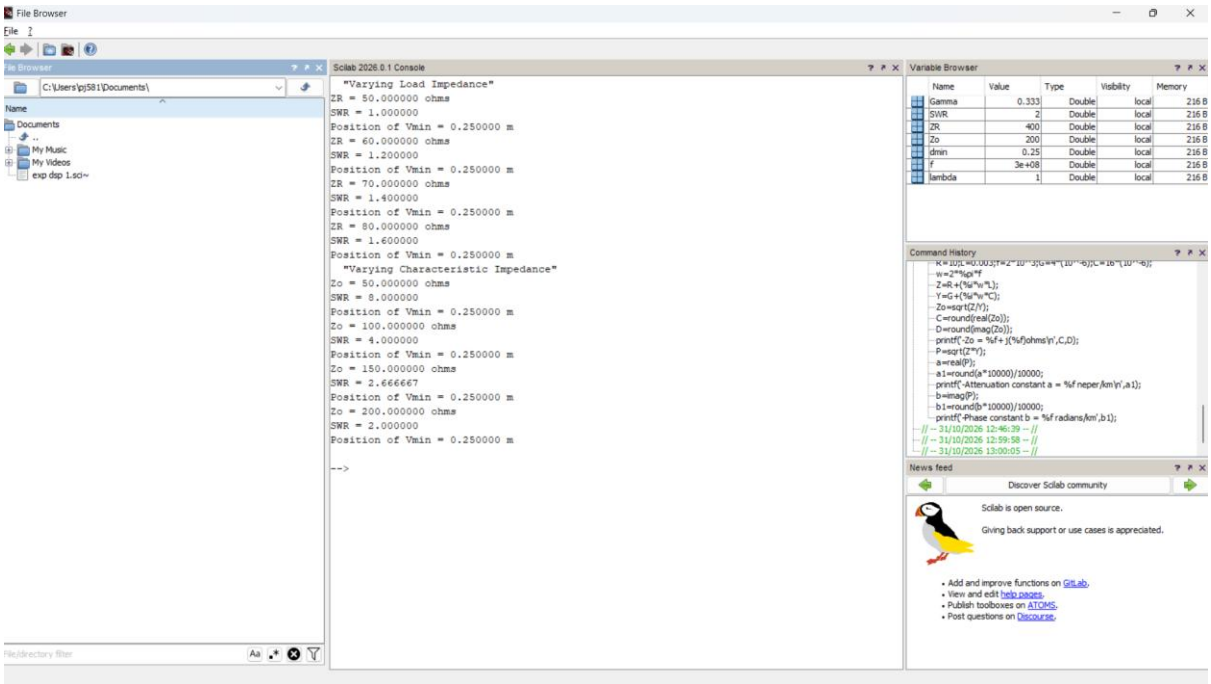

5. Exploration of the relationship between position of Voltage minima nearest to the load by varying magnitude of reflection coefficient K

TEEST CASE 1

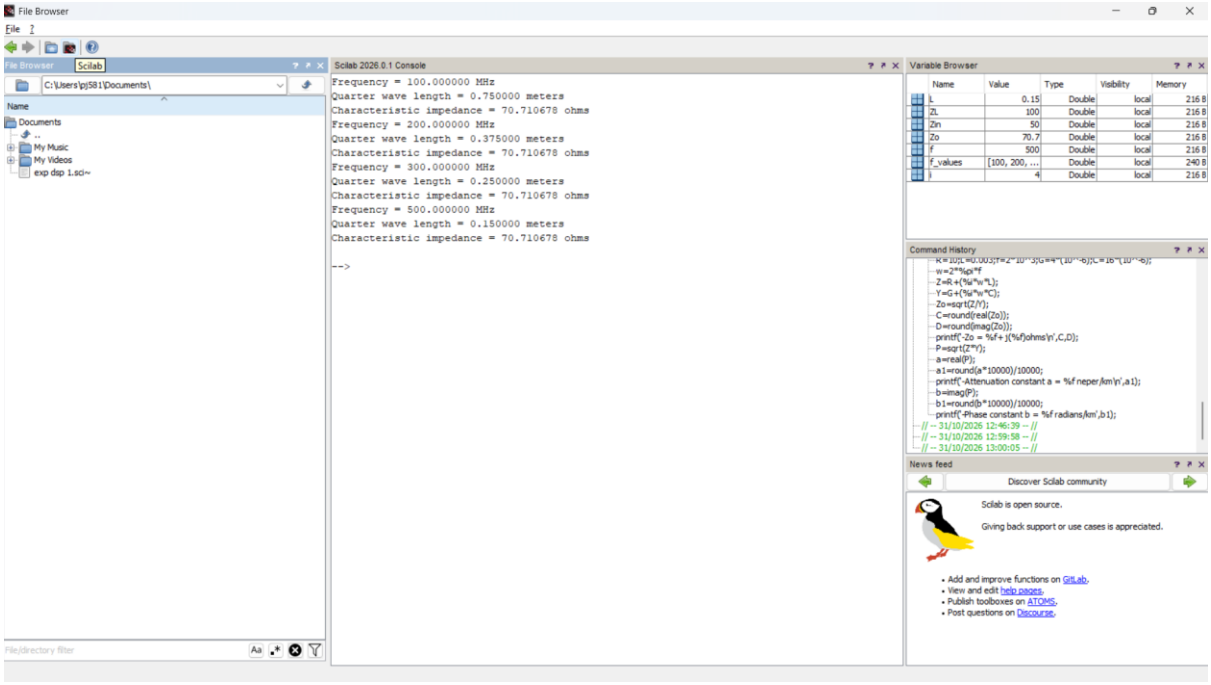

TEST CASE 2

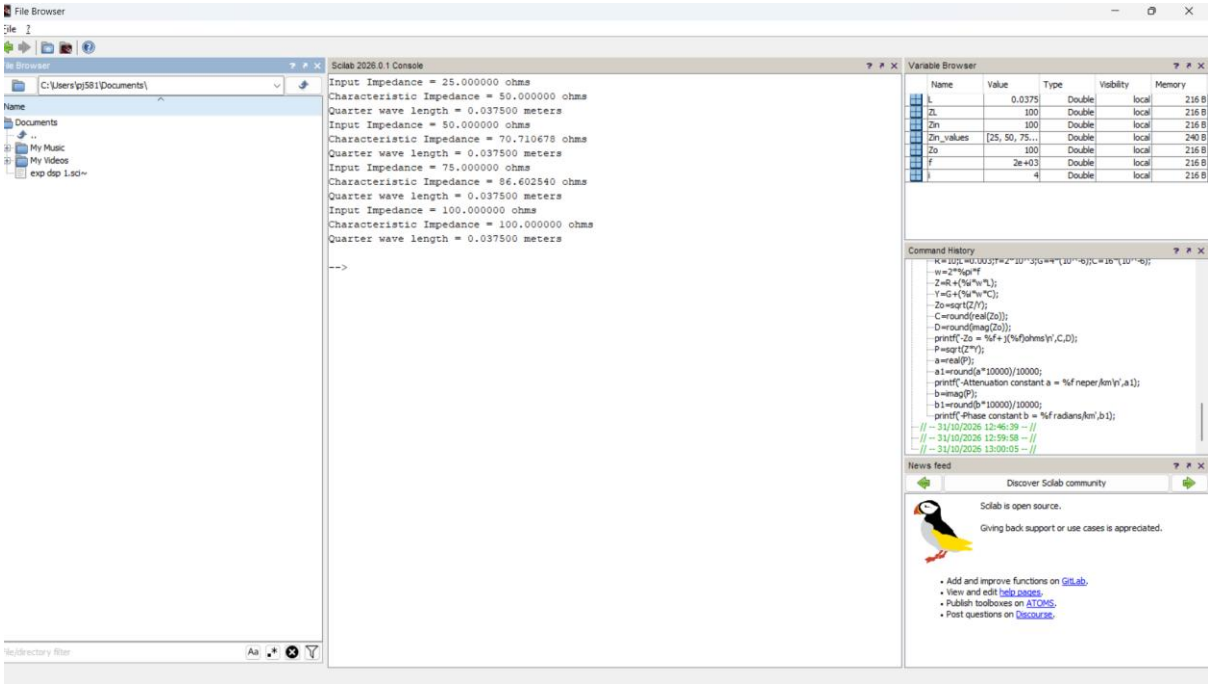

6. Designing a Quarter wave transformer by varying following parameters a) frequency b) input impedance c) characteristic impedance

TEST CASE 1

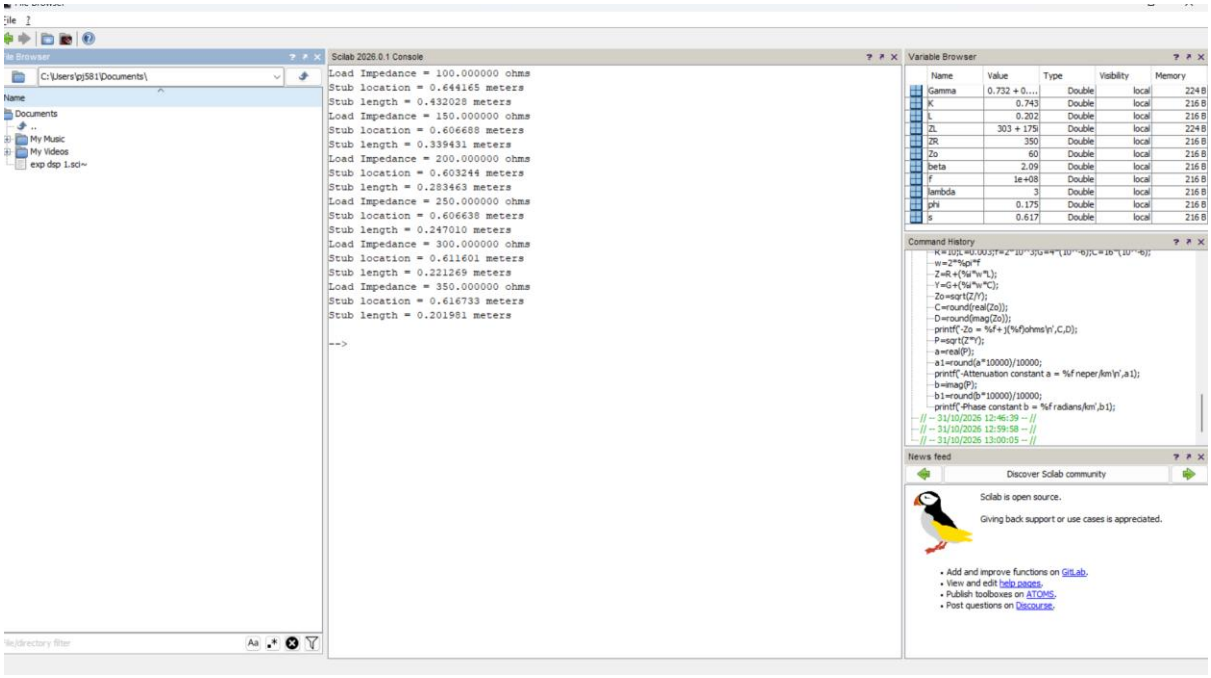

TEST CASE 2

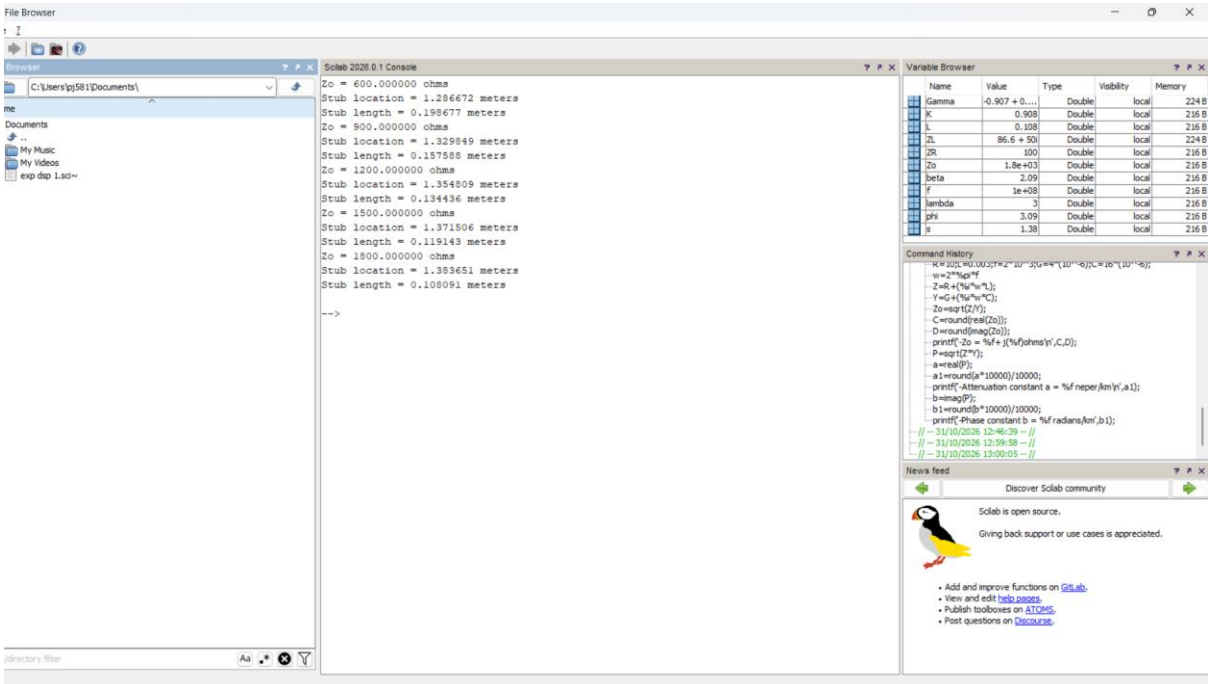

7. Strategize impedance matching with characteristic impedance and load impedance throughthe measurement of a) Location of the stub b) Length of the stu

TEST CASE 1

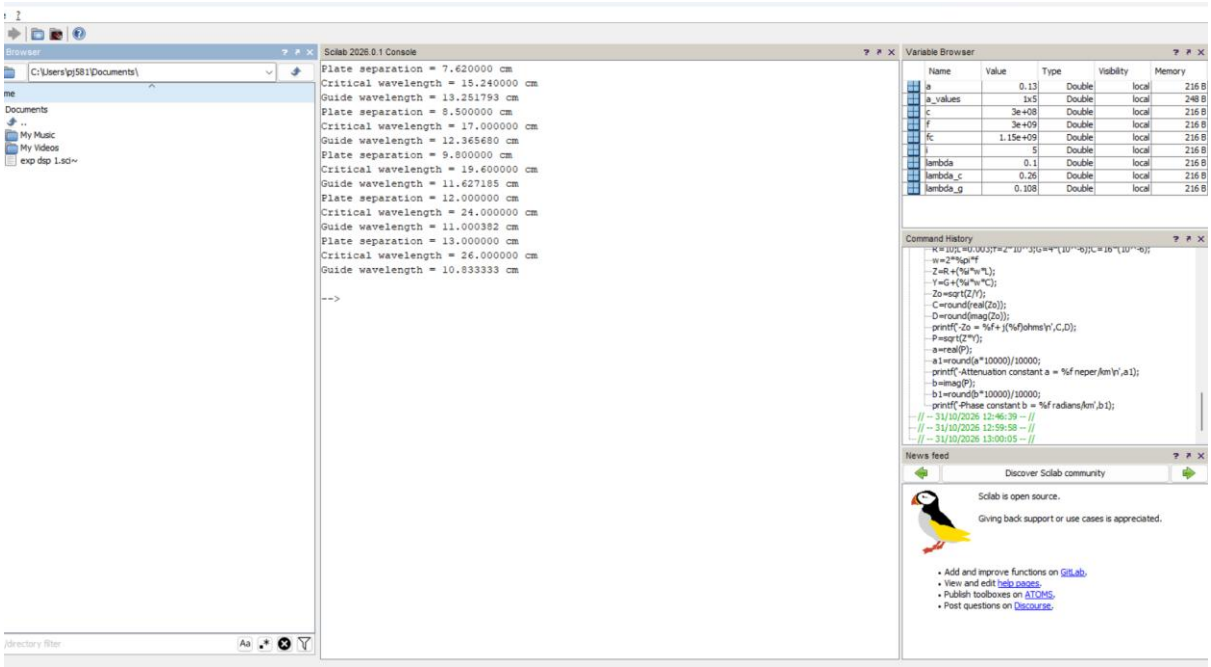

TEST CASE 2

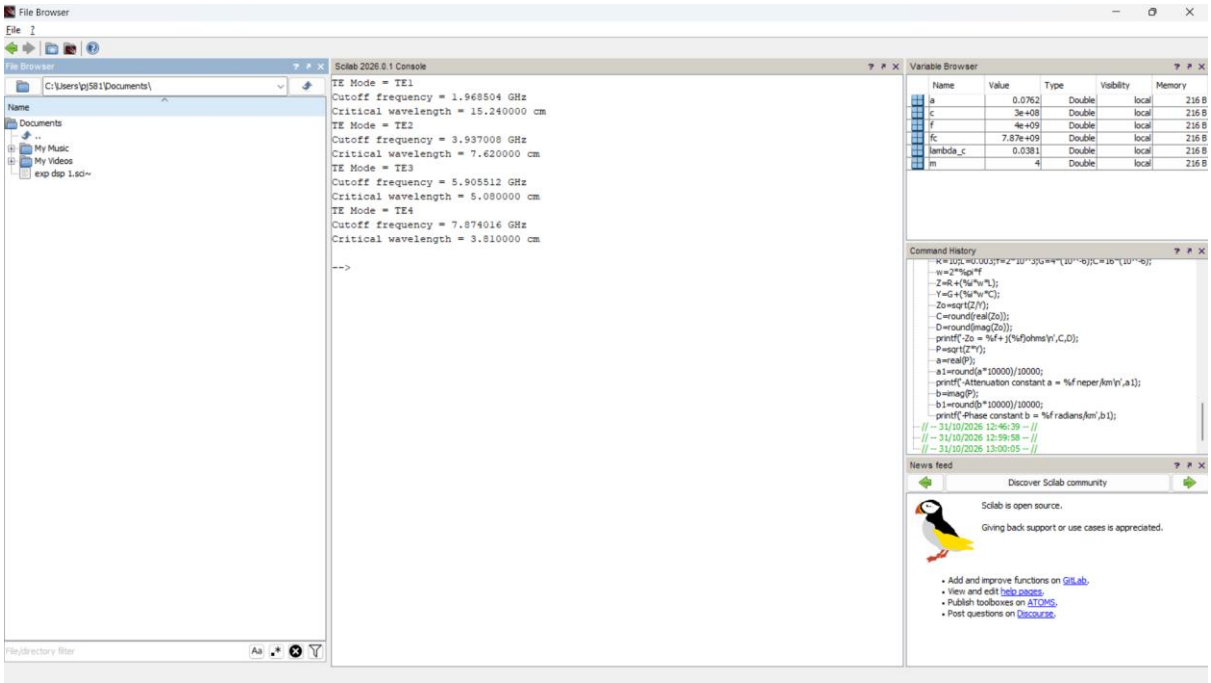

8. Analysis of Electromagnetic Waves across the two parallel plates estimating the following a) Critical Wavelength b) Guide Wavelength

TEST CASE 1

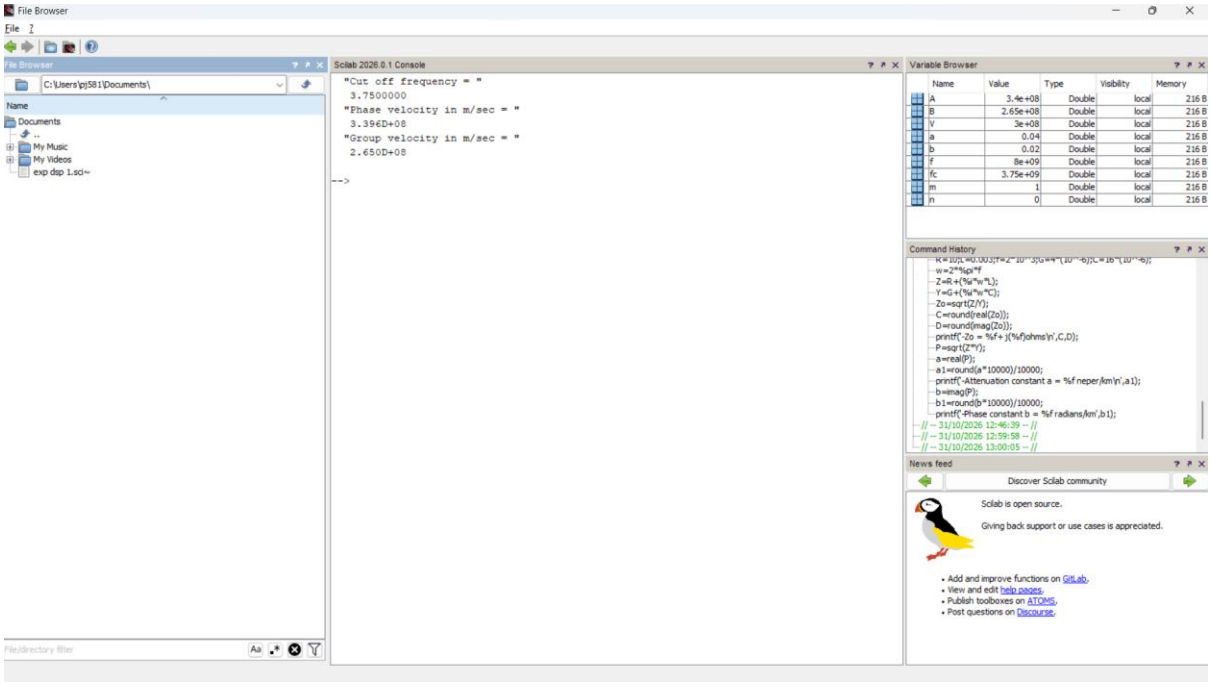

TEST CASE 2

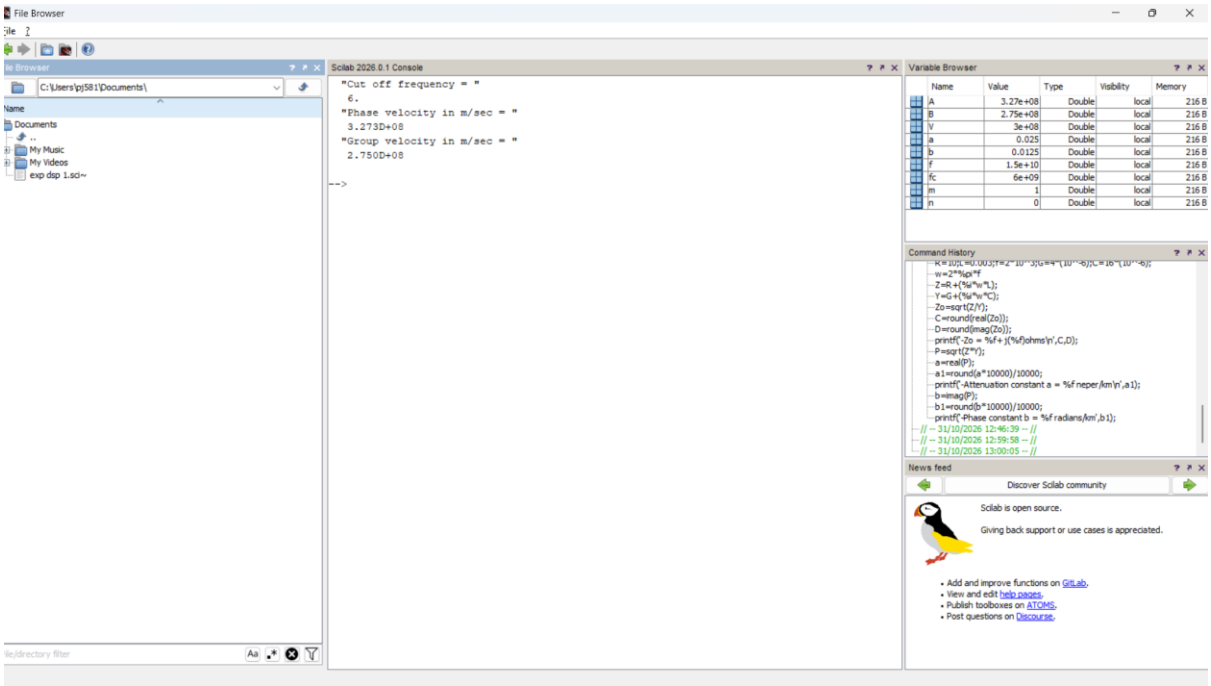

9. Calculation of Group velocity, Phase velocity and phase constant of EM waves in rectangular waveguides

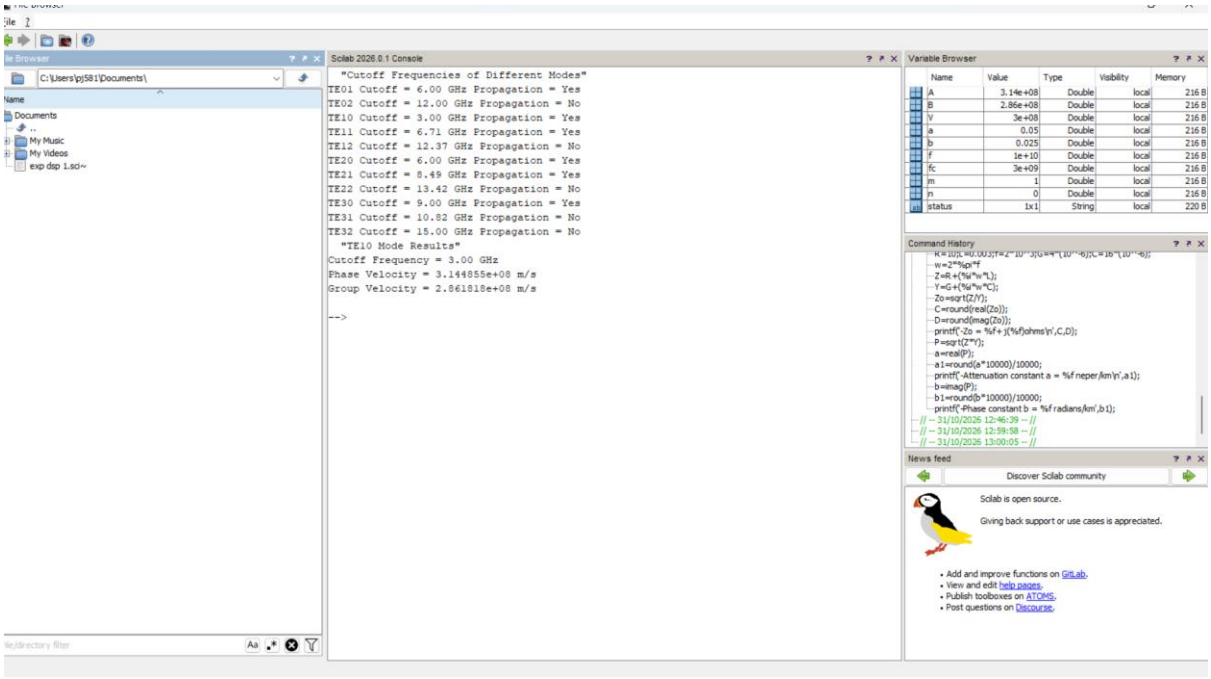

TEST CASE 1

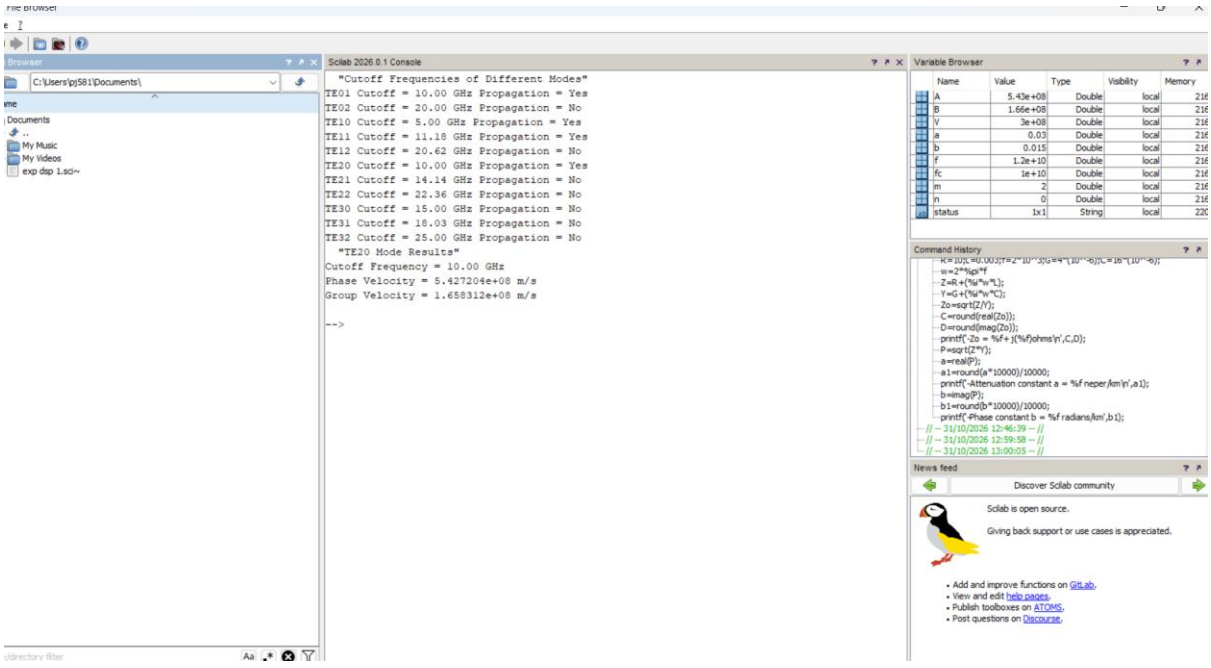

TEST CASE 2

TEST CASE 3

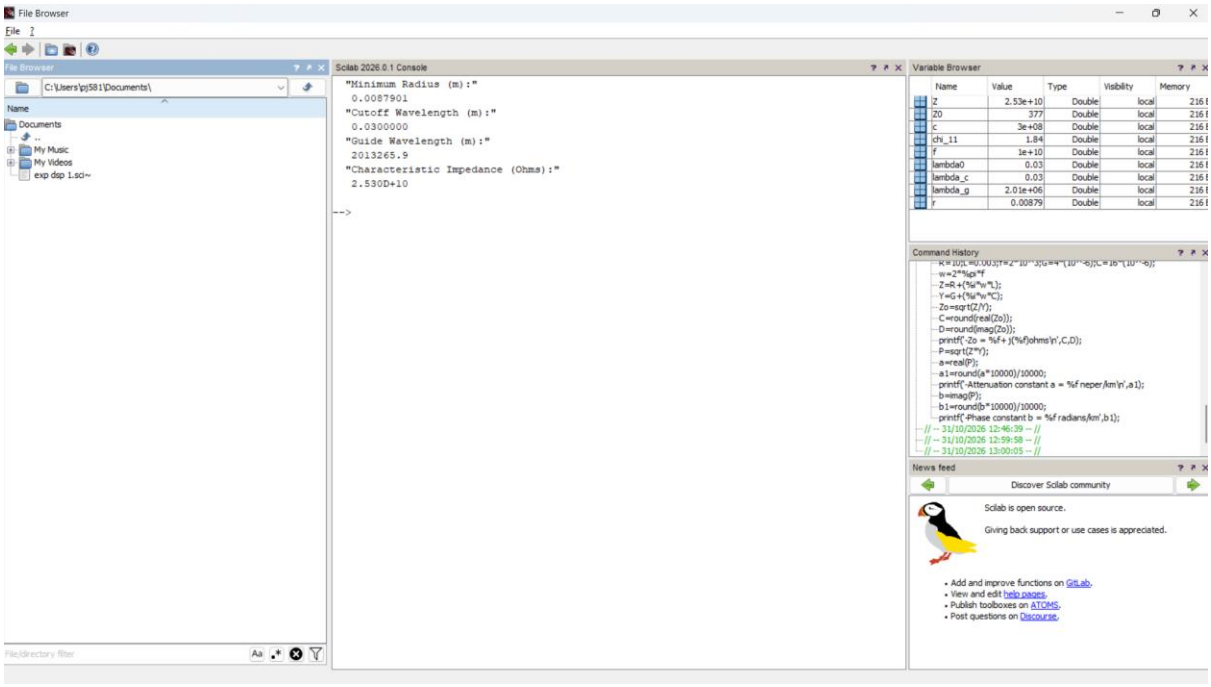

TEST CASE 4

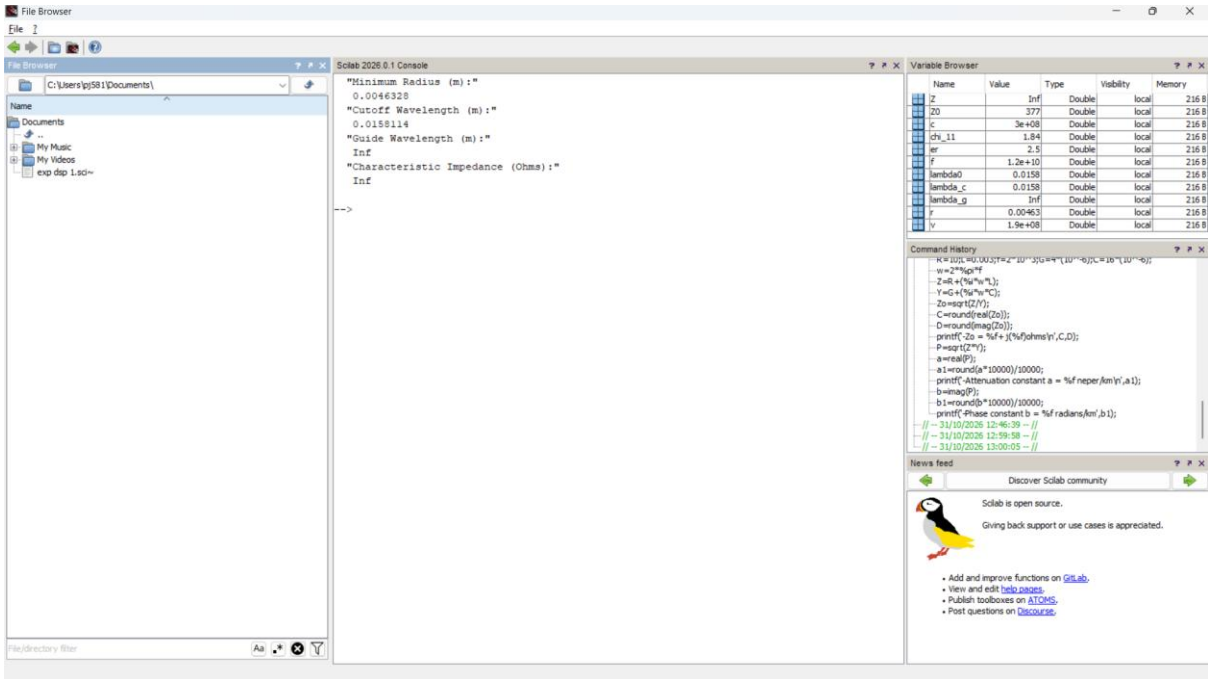

10. Examining the propagation characteristics of circular waveguide in terms of a) Cutoff wavelength d) Guide wavelength e) Characteristic impedance

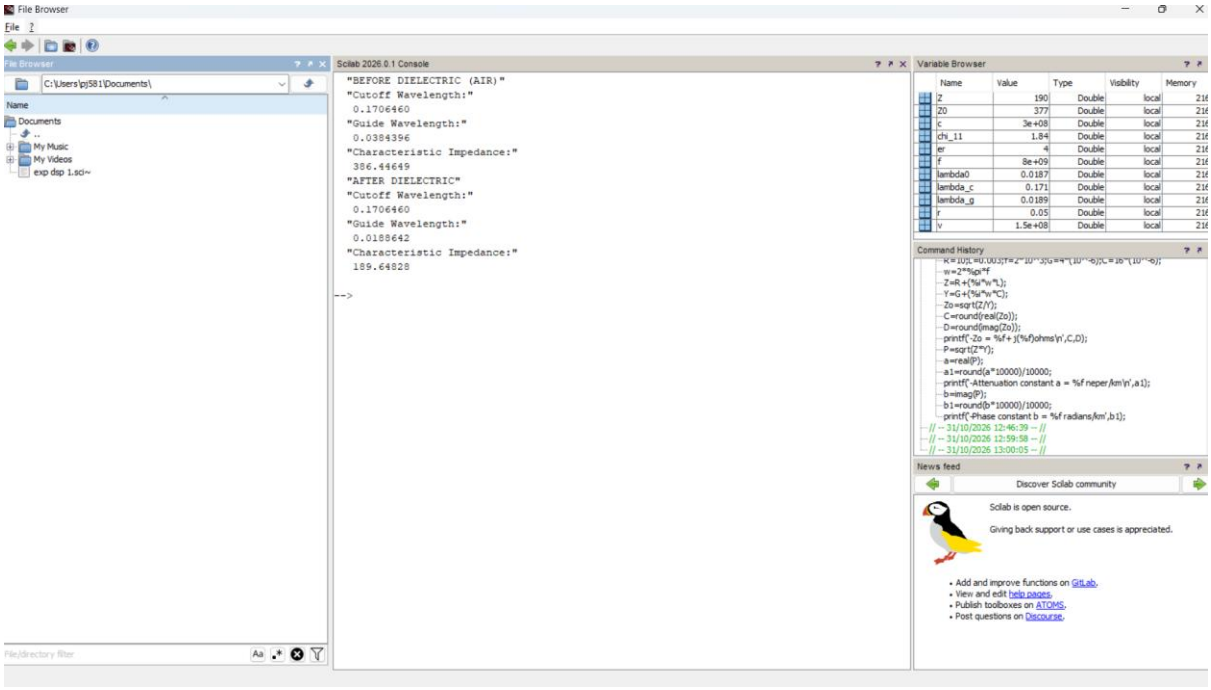

TEST CASE 1

TEST CASE 2

TEST CASE 3

TEST CASE 4
